A FIRST BOOK IN ALGEBRA

BY

WALLACE C. BOYDEN, A.M.

SUB-MASTER OF THE BOSTON NORMAL SCHOOL

1895

PREFACE

In preparing this book, the author had especially in mind classes in the upper grades of grammar schools, though the work will be found equally well adapted to the needs of any classes of beginners.

The ideas which have guided in the treatment of the subject are the following: The study of algebra is a continuation of what the pupil has been doing for years, but it is expected that this new work will result in a knowledge of *general truths* about numbers, and an increased power of clear thinking. All the differences between this work and that pursued in arithmetic may be traced to the introduction of two new elements, namely, negative numbers and the representation of numbers by letters. The solution of problems is one of the most valuable portions of the work, in that it serves to develop the thought-power of the pupil at the same time that it broadens his knowledge of numbers and their relations. Powers are developed and habits formed only by persistent, long-continued practice.

Accordingly, in this book, it is taken for granted that the pupil knows what he may be reasonably expected to have learned from his study of arithmetic; abundant practice is given in the representation of numbers by letters, and great care is taken to make clear the meaning of the minus sign as applied to a single number, together with the modes of operating upon negative numbers; problems are given in every exercise in the book; and, instead of making a statement of what the child is to see in the illustrative example, questions are asked which shall lead him to find for himself that which he is to learn from the example.

A FIRST BOOK IN ALGEBRA.

ALGEBRAIC NOTATION.

1. Algebra is so much like arithmetic that all that you know about addition, subtraction, multiplication, and division, the signs that you have been using and the ways of working out problems, will be very useful to you in this study. There are two things the introduction of which really makes all the difference between arithmetic and algebra. One of these is the use of *letters to represent numbers*, and you will see in the following exercises that this change makes the solution of problems much easier.

Exercise I.

Illustrative Example. The sum of two numbers is 60, and the greater is four times the less. What are the numbers?

Solution.

$$
\begin{aligned}
\text{Let} \qquad & x = \text{the less number;} \\
\text{then} \qquad & 4x = \text{the greater number,} \\
\text{and} \qquad & 4x + x = 60, \\
\text{or} \qquad & 5x = 60; \\
\text{therefore} \qquad & x = 12, \\
\text{and} \qquad & 4x = 48. \quad \text{The numbers are 12 and 48.}
\end{aligned}
$$

1. The greater of two numbers is twice the less, and the sum of the numbers is 129. What are the numbers?

2. A man bought a horse and carriage for \$500, paying three times as much for the carriage as for the horse. How much did each cost?

3. Two brothers, counting their money, found that together they had \$186, and that John had five times as much as Charles. How much had each?

4. Divide the number 64 into two parts so that one part shall be seven times the other.

5. A man walked 24 miles in a day. If he walked twice as far in the forenoon as in the afternoon, how far did he walk in the afternoon?

6. For 72 cents Martha bought some needles and thread, paying eight times as much for the thread as for the needles. How much did she pay for each?

7. In a school there are 672 pupils. If there are twice as many boys as girls, how many boys are there?

   Illustrative Example. If the difference between two numbers is 48, and one number is five times the other, what are the numbers?

Solution.

$$
\begin{aligned}
&\text{Let} && x = \text{the less number};\\
&\text{then} && 5x = \text{the greater number},\\
&\text{and} && 5x - x = 48,\\
&\text{or} && 4x = 48;\\
&\text{therefore} && x = 12,\\
&\text{and} && 5x = 60.
\end{aligned}

ILLUS. 2. The sum of $m + m + m +$ etc. written x times is xm.

The **coefficient** is the number which shows how many times the number following is taken additively. If no coefficient is expressed, *one* is understood.

Read each of the following numbers, name the coefficient, and state what it shows:

$$6a, \ 2y, \ 3x, \ ax, \ 5m, \ 9c, \ xy, \ mn, \ 10z, \ a, \ 25n, \ x, \ 11xy.$$

SUBTRACTION.

3.   ILLUS. 1.   A man sold a horse for $225 and gained $75.
   What did the horse cost?

   ILLUS. 2.   A farmer sold a sheep for m dollars and gained
   y dollars. What did the sheep cost? *Ans. $m - y$ dollars.*

Subtraction is expressed by the sign minus $(-)$.

   ILLUS. 3.   A man started at a certain point and traveled
   north 15 miles, then south 30 miles, then north 20 miles,
   then north 5 miles, then south 6 miles. How far is he
   from where he started and in which direction?

   ILLUS. 4.   A man started at a certain point and traveled east x
   miles, then west b miles, then east m miles, then east y
   miles, then west z miles. How far is he from where he started?

We find a difficulty in solving this last example, because we do not know just how large x, b, m, y, and z are with reference to each other. This is only one example of a large class of problems which may arise, in which we find direction east and west, north and south; space before and behind, to the right and to the left, above and below; time past and future; money gained and lost; everywhere these opposite relations. This relation of oppositeness must be expressed in some way in our representation of numbers.

In algebra, therefore, numbers are considered as increasing from zero in opposite directions. Those in one direction are called Positive Numbers (or + numbers); those in the other direction Negative Numbers (or - numbers).

In Illus. 4, if we call direction east positive, then direction west will be negative, and the respective distances that the man traveled will be $+x, -b, +m, +y$, and $-z$. Combining these, the answer to the problem becomes $x - b + m + y - z$. If the same analysis be applied to Illus. 3, we get 15 - 30 + 20 + 5 - 6 = +4, or 4 miles north of starting-point.

   The minus sign before a single number makes the number negative, and shows that the number has a subtractive relation to any other to which it may be united, and that it will diminish that number by its value. It shows a relation rather than an operation.

Negative numbers are the second of the two things referred to on page 7, the introduction of which makes all the difference between arithmetic and algebra.

NOTE.—Negative numbers are usually spoken of as less than zero, because they are used to represent losses. To illustrate: suppose a man's money affairs be such that his debts just equal his assets, we say that he is worth nothing. Suppose now that the sum of his debts is $1000 greater than his total assets. He is worse off than by the first supposition, and we say that he is worth less than nothing. We should represent his property by -1000 (dollars).

In arithmetic you learned that multiplication is the addition of equal numbers, that the multiplicand expresses one of those equal numbers, and the multiplier the number of them. In algebra we have negative as well as positive numbers. Let us see the effect of this in multiplication. We have four possible cases.

1. Multiplication of a plus number by a plus number.

$$+7$$
ILLUS. $$\underline{+4}$$ This must mean *four sevens*, or 28.

2. Multiplication of a minus number by a plus number.

19. Since division is the reverse of multiplication, let us consider an example in the multiplication of polynomials.

$$
\begin{array}{r}
x^3 + 2x^2 + 3x \\
3x^2 - 2x + 3 \\
\hline
3x^5 + 6x^4 + 9x^3 \\
- 2x^4 - 4x^3 - 6x^2 \\
3x^3 + 6x^2 + 9x \\
\hline
3x^5 + 4x^4 + 8x^3 \qquad + 9x
\end{array}
$$

Which of these numbers will become the dividend in our division? Take $x^3 + 2x^2 + 3x$ for the divisor. What will be the quotient? Write these names opposite the different numbers. What is the last operation performed in obtaining the dividend? What then is the dividend? How are these partial products obtained?

Keeping these facts in mind, we will start on the work of division, using these same numbers for convenience.

ILLUS. 1.[3]

How was the first term of the dividend formed? How can the first term of the quotient be found? Knowing the divisor and first term of the quotient, what can be formed? Subtract this from the dividend. How was the first term of the remainder formed? What can now be found? How? What can then be formed? etc., etc. How long can this process be continued?

To divide a polynomial by a polynomial, arrange the terms of the dividend, and divisor similarly, divide the first term of the dividend by the first term of the divisor for the first term of the quotient, multiply the divisor by the quotient and subtract the product from the dividend; divide the first term of the remainder by the first term of the divisor for the next term of the quotient, multiply and subtract as before; continue this work of dividing, multiplying, and subtracting until there is no remainder or until the first term of the remainder is not divisible by the first term of the divisor.

In case the terms of the fraction are polynomials, notice that the change in sign affects every term of the numerator or denominator.

When the denominator of the fraction is expressed in its factors, the variety of changes is increased.

ILLUS. 4.
$$\frac{a}{(x-y)(m-n)} = \frac{a}{(y-x)(n-m)} = \frac{-a}{(y-x)(m-n)}$$

EQUATIONS

43.　ILLUS. 1.　$27 + 10x = 13x + 23$.

　　　ILLUS. 2.　$\dfrac{a^2}{x} + \dfrac{b}{2} = \dfrac{4b^2}{x} + \dfrac{a}{4}$.

An **equation** is an expression of the equality of two numbers. The parts of the expression separated by the sign of equality are called the **members** of the equation.

The last letters of the alphabet are used to represent unknown numbers, and known numbers are represented by figures or by the first letters of the alphabet.

44.　ILLUS. 1.　$5x + 20 = 105$.

　　　　　　　　　$5x = 85$.

　　　ILLUS. 2.　$3x - 18 = 42$.

　　　　　　　　　$3x = 60$.

　　　ILLUS. 3.　　　$\frac{x}{12} = 2$.

　　　　　　　　　$x = 24$.

　　　ILLUS. 4.　　　$7x = 49$.

　　　　　　　　　　$x = 7$.

Any changes may be made in an equation which do not destroy the equality of the members.

Name some of the ways in which such changes may be made.

45.　ILLUS. 1.　$x + b = a$. Subtracting b from each member, $x = a - b$.

　　　ILLUS. 2.　$x - b = c$. Adding b to each member, $x = c + b$.

In each of these illustrations b has been transposed (changed over) from the first to the second member, and in each case its sign has been changed. Hence,

Any term may be transposed from one member of an equation to the other provided its sign be changed.

46. ILLUS. $\dfrac{ab + x}{b^2} - \dfrac{b^2 - x}{a^2 b} = \dfrac{x - b}{a^2} - \dfrac{ab - x}{b^2}$.

Multiply both members by $a^2 b^2$,

$$a^3 b + a^2 x - b^3 + bx = b^2 x - b^3 - a^3 b + a^2 x.$$

To clear an equation of fractions, multiply each member of the equation by the L.C.M. of the denominators of the fractional terms.

47. ILLUS. 1. Solve

$$x + 4 + 2(x - 1) = 3x + 4 - (5x - 8)$$
$$x + 5 + 2x - 2 = 3x + 4 - 5x - 8$$
$$\text{Transposing, } x + 2x - 3x + 5x = 4 + 8 - 4 + 2$$
$$5x = 10$$
$$x = 2$$

ILLUS. 2. Solve $\dfrac{5x + 3}{8} - \dfrac{3 - 4x}{3} + \dfrac{x}{2} = \dfrac{31}{2} - \dfrac{9 - 5x}{6}$. Multiply by 24,

$$3(5x + 3) - 8(3 - 4x) + 12x = 372 - 4(9 - 5x)$$
$$15x + 9 - 24 + 32x + 12x = 372 - 36 + 20x$$
$$\text{Transposing, } 15x + 32x + 12x - 20x = 372 - 36 - 9 + 24$$
$$39x = 351$$
$$x = 9$$

To solve an equation, clear of fractions if necessary, transpose the terms containing the unknown number to one member and the known terms to the other, unite the terms, and divide both members by the coefficient of the unknown number.

48. ILLUS. $\left. \begin{array}{l} x + y = 8, \ x = 3 \\ 4x - y = 7, \ y = 5 \end{array} \right\}$ in both equations.

Simultaneous equations are equations in which the same unknown numbers have the same value.

One equation containing more than one unknown number cannot be solved. There must be as many simultaneous equations as there are unknown numbers.

$$\text{ILLUS. 1. Solve}\begin{cases} x + 3y = 17, \\ 2x + y = 9. \end{cases}$$

Multiply the first equation by 2;

$$\begin{array}{ll} \text{then} & 2x + 6y = 34, \\ \text{but} & 2x + y = 9 \\ \hline \text{Subtracting,} & 5y = 25 \\ & y = 5. \end{array}$$

To find the value of x, substitute the value of y in the second equation:

$$2x + 5 = 9, 2x = 4, x = 2.$$

$$Ans. \begin{cases} x = 2, \\ y = 5 \end{cases}$$

$$\text{ILLUS. 2. Solve}\begin{cases} 3x + 4y = 12, \\ 5x - 6y = 1. \end{cases}$$

Substituting, $6 + 4y = 12$, $4y = 6$, $y = 1\frac{1}{2}$.

Multiply one or both of the equations by such a number that one of the unknown numbers shall have like coefficients. If the signs of the terms having like coefficients are alike, subtract one equation from the other; if unlike, add the equations.

Do you possess greater ability to think out problems? Has the use of letters to represent numbers made you think more exactly what is to be done, and what the operations mean?* If so, your knowledge of numbers is broader, and you already know that

Creating the works from public domain print editions means that no
one owns a United States copyright in these works, so the Foundation
(and you!) can copy and distribute it in the United States without
permission and without paying copyright royalties. Special rules,
set forth in the General Terms of Use part of this license, apply to
copying and distributing Project Gutenberg-tm electronic works to
protect the PROJECT GUTENBERG-tm concept and trademark. Project
Gutenberg is a registered trademark, and may not be used if you
charge for the eBooks, unless you receive specific permission. If you
do not charge anything for copies of this eBook, complying with the
rules is very easy. You may use this eBook for nearly any purpose
such as creation of derivative works, reports, performances and
research. They may be modified and printed and given away--you may do
practically ANYTHING with public domain eBooks. Redistribution is

THE FULL PROJECT GUTENBERG LICENSE
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free
distribution of electronic works, by using or distributing this work
(or any other work associated in any way with the phrase "Project
Gutenberg"), you agree to comply with all the terms of the Full Project
Gutenberg-tm License (available with this file or online at
http://gutenberg.net/license).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm
electronic works

1.A. By reading or using any part of this Project Gutenberg-tm
electronic work, you indicate that you have read, understand, agree to
and accept all the terms of this license and intellectual property
(trademark/copyright) agreement. If you do not agree to abide by all
the terms of this agreement, you must cease using and return or destroy
all copies of Project Gutenberg-tm electronic works in your possession.
If you paid a fee for obtaining a copy of or access to a Project
Gutenberg-tm electronic work and you do not agree to be bound by the
terms of this agreement, you may obtain a refund from the person or
entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be
used on or associated in any way with an electronic work by people who
agree to be bound by the terms of this agreement. There are a few
things that you can do with most Project Gutenberg-tm electronic works
even without complying with the full terms of this agreement. See
paragraph 1.C below. There are a lot of things you can do with Project
Gutenberg-tm electronic works if you follow the terms of this agreement
and help preserve free future access to Project Gutenberg-tm electronic
works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation"
or PGLAF), owns a compilation copyright in the collection of Project
Gutenberg-tm electronic works. Nearly all the individual works in the
collection are in the public domain in the United States. If an
individual work is in the public domain in the United States and you are
located in the United States, we do not claim a right to prevent you from
copying, distributing, performing, displaying or creating derivative
works based on the work as long as all references to Project Gutenberg
are removed. Of course, we hope that you will support the Project
Gutenberg-tm mission of promoting free access to electronic works by
freely sharing Project Gutenberg-tm works in compliance with the terms of
this agreement for keeping the Project Gutenberg-tm name associated with
the work. You can easily comply with the terms of this agreement by
keeping this work in the same format with its attached full Project
Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern
what you can do with this work. Copyright laws in most countries are in
a constant state of change. If you are outside the United States, check
the laws of your country in addition to the terms of this agreement
before downloading, copying, displaying, performing, distributing or
creating derivative works based on this work or any other Project
Gutenberg-tm work. The Foundation makes no representations concerning
the copyright status of any work in any country outside the United
States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate

1.E.7. Do not charge a fee for access to, viewing, displaying,
performing, copying or distributing any Project Gutenberg-tm works
unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing
access to or distributing Project Gutenberg-tm electronic works provided
that

- You pay a royalty fee of 20% of the gross profits you derive from
     the use of Project Gutenberg-tm works calculated using the method
     you already use to calculate your applicable taxes. The fee is
     owed to the owner of the Project Gutenberg-tm trademark, but he
     has agreed to donate royalties under this paragraph to the
     Project Gutenberg Literary Archive Foundation. Royalty payments
     must be paid within 60 days following each date on which you
     prepare (or are legally required to prepare) your periodic tax
     returns. Royalty payments should be clearly marked as such and
     sent to the Project Gutenberg Literary Archive Foundation at the
     address specified in Section 4, "Information about donations to
     the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies
     you in writing (or by e-mail) within 30 days of receipt that s/he
     does not agree to the terms of the full Project Gutenberg-tm
     License. You must require such a user to return or
     destroy all copies of the works possessed in a physical medium
     and discontinue all use of and all access to other copies of
     Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any
     money paid for a work or a replacement copy, if a defect in the
     electronic work is discovered and reported to you within 90 days
     of receipt of the work.

- You comply with all other terms of this agreement for free
     distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm
electronic work or group of works on different terms than are set
forth in this agreement, you must obtain permission in writing from
both the Project Gutenberg Literary Archive Foundation and Michael
Hart, the owner of the Project Gutenberg-tm trademark. Contact the
Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable
effort to identify, do copyright research on, transcribe and proofread
public domain works in creating the Project Gutenberg-tm

collection. Despite these efforts, Project Gutenberg-tm electronic
works, and the medium on which they may be stored, may contain
"Defects," such as, but not limited to, incomplete, inaccurate or
corrupt data, transcription errors, a copyright or other intellectual
property infringement, a defective or damaged disk or other medium, a
computer virus, or computer codes that damage or cannot be read by
your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right
of Replacement or Refund" described in paragraph 1.F.3, the Project
Gutenberg Literary Archive Foundation, the owner of the Project
Gutenberg-tm trademark, and any other party distributing a Project
Gutenberg-tm electronic work under this agreement, disclaim all
liability to you for damages, costs and expenses, including legal
fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT
LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE
PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE
TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE
LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR
INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH
DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a
defect in this electronic work within 90 days of receiving it, you can
receive a refund of the money (if any) you paid for it by sending a
written explanation to the person you received the work from. If you
received the work on a physical medium, you must return the medium with
your written explanation. The person or entity that provided you with
the defective work may elect to provide a replacement copy in lieu of a
refund. If you received the work electronically, the person or entity
providing it to you may choose to give you a second opportunity to
receive the work electronically in lieu of a refund. If the second copy
is also defective, you may demand a refund in writing without further
opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth
in paragraph 1.F.3, this work is provided to you ’AS-IS’, WITH NO OTHER
WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO
WARRANTIES OF MERCHANTIBILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied
warranties or the exclusion or limitation of certain types of damages.
If any disclaimer or limitation set forth in this agreement violates the
law of the state applicable to this agreement, the agreement shall be
interpreted to make the maximum disclaimer or limitation permitted by
the applicable state law. The invalidity or unenforceability of any
provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the
trademark owner, any agent or employee of the Foundation, anyone

providing copies of Project Gutenberg-tm electronic works in accordance
with this agreement, and any volunteers associated with the production,
promotion and distribution of Project Gutenberg-tm electronic works,
harmless from all liability, costs and expenses, including legal fees,
that arise directly or indirectly from any of the following which you do
or cause to occur: (a) distribution of this or any Project Gutenberg-tm
work, (b) alteration, modification, or additions or deletions to any
Project Gutenberg-tm work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of
electronic works in formats readable by the widest variety of computers
including obsolete, old, middle-aged and new computers. It exists
because of the efforts of hundreds of volunteers and donations from
people in all walks of life.

Volunteers and financial support to provide volunteers with the
assistance they need, is critical to reaching Project Gutenberg-tm's
goals and ensuring that the Project Gutenberg-tm collection will
remain freely available for generations to come. In 2001, the Project
Gutenberg Literary Archive Foundation was created to provide a secure
and permanent future for Project Gutenberg-tm and future generations.
To learn more about the Project Gutenberg Literary Archive Foundation
and how your efforts and donations can help, see Sections 3 and 4
and the Foundation web page at http://www.pglaf.org.

Section 4. Information about Donations to the Project Gutenberg
Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide
spread public support and donations to carry out its mission of
increasing the number of public domain and licensed works that can be
freely distributed in machine readable form accessible by the widest
array of equipment including outdated equipment. Many small donations
($1 to $5,000) are particularly important to maintaining tax exempt
status with the IRS.

The Foundation is committed to complying with the laws regulating
charities and charitable donations in all 50 states of the United
States. Compliance requirements are not uniform and it takes a
considerable effort, much paperwork and many fees to meet and keep up
with these requirements. We do not solicit donations in locations
where we have not received written confirmation of compliance. To
SEND DONATIONS or determine the status of compliance for any
particular state visit http://pglaf.org

While we cannot and do not solicit contributions from states where we
have not met the solicitation requirements, we know of no prohibition
against accepting unsolicited donations from donors in such states who
approach us with offers to donate.

International donations are gratefully accepted, but we cannot make
any statements concerning tax treatment of donations received from
outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation
methods and addresses. Donations are accepted in a number of other
ways including including checks, online payments and credit card
donations. To donate, please visit: http://pglaf.org/donate

Section 5. General Information About Project Gutenberg-tm electronic
works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm
concept of a library of electronic works that could be freely shared
with anyone. For thirty years, he produced and distributed Project
Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed
editions, all of which are confirmed as Public Domain in the U.S.
unless a copyright notice is included. Thus, we do not necessarily

keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

Archive Foundation, how to help produce our new eBooks, and how to
